

## INSTRUCTIONS FOR THE MAINTENANCE OF YOUR TREATED GLASS SHOWER

**ClearShield has transformed your glass into non-stick, easy to clean glass. It is important however, that you assist by drying your glass regularly as per instructions below.**

After showering, hold the detachable shower head to the top corner of the glass and move across working down the glass in a zigzag motion. The weight of the water will push the moisture down the glass leaving it dry. Allow for several drips left on the glass which should be removed by wiping with a dry cloth. The quantity of droplets left on the glass is regulated by the type of flow generated by the shower head. The perfect flow resembles a hose with no attachment.

### LIMESCALE REMOVER (LSR)

After some time, you may notice a cluster of droplets remaining on the glass after hosing down. If so, repeat hosing down method on that area of concern. If droplets still remain on the glass, then this is referred to as contamination which is caused by moisture being left on the glass and an indication that the glass is not getting dried regularly enough.

It is then time to apply the LSR (pink). Simply squirt product onto damp pad supplied and agitate the area of concern. Rinse off with shower head as mentioned above. The more effort used in hosing down and drying the glass initially as described above, the less often LSR is required.

### CONDITIONER

If after a few months the water has noticeably slowed down in its descent down the glass as you hose it down, it is time to apply the Conditioner (blue). Apply onto dry glass. Agitate with a damp pad for approximately one minute then hose off. You will notice that the speed of descent has quickened up. The Conditioner promotes longevity and performance of ClearShield.

### Note

1. By following the above instructions and using the recommended aftercare products, will ensure the service life of ClearShield treated glass.
2. **DO NOT USE** abrasive methods, pads and compounds as well as alkaline cleaners, while cleaning glass.
3. Your Applicator is available if, and when you require their advice or assistance
4. For a video demonstration on how to maintain your shower glass, please go to the national website [www.clearshieldeco.com.au](http://www.clearshieldeco.com.au)
5. To order or reorder any of your after-care products, please visit the “shop” section on our website
